Fully authorized to work in the U.S. – Green Card Holder

iOS engineer who **owns the full product**, not just the ticket - **11 years** of iOS specialization within a 25-year career. Ships fintech, trading, transit, sound live streaming, and consumer apps to **millions of users**, delivering pixel-perfect UI, testing, and legacy-stack modernization under deadline pressure. Multiplies impact through mentoring, code-review standards for 150+ engineers, and industry judging panels.

EXPERIENCE

New Digital World - Wilmington, DE (Remote) Mar 2023 - Present

Founder & Lead iOS Developer

- Rescued a legacy **Objective-C/Swift** codebase under a **36-hour** contract, triaging crash logs to fix **5 critical crashes** while preserving business logic. Introduced **SwiftLint** rules and **VIPER** architecture templates to standardize development. Migrated off **CocoaPods** - increasingly incompatible with modern **Xcode** and requiring manual workarounds - onto **Swift Package Manager (SPM)**, replacing that manual upkeep with **automatic dependency resolution** on every branch switch.
- Launched **getBUS**, a transit app built natively for **iOS (Swift)** and **Android (Kotlin)** with analytics instrumentation, **feature flags**, and **remote config**. Rebuilt the UI/UX design natively for iOS and Android, with fluid animations throughout and a custom algorithm computing live bus-pin heading and movement on the map. Reached **20,000 users** and a **4.6 rating** in both app stores.
- Sped up photo preparation and upload processing by **5x** as a contractor for **WiFi Map,** a **Web3 crypto** app with **200 million users**. Developed detail cards surfacing full pin information on tap and added filters to refine which pins display on the map.
- Designed animated, elastic headers for **15 white-label broker trading apps** as a contractor for **EXANTE**, improving on-screen data visibility by **35%** and layout responsiveness across device sizes. Customized data exchange with the server via raw **Protobuf** messages over a **socket**, bridging a large Objective-C-only schema into Swift. Rewrote the authorization screen from **UIKit** to **SwiftUI**, adapted per white-label branding, and enabled **Sign in with Google** and **Sign in with Apple** via **OAuth**, strengthening mobile security.
- Architected **push-notification** routing that separated notification types and triggered distinct in-app actions, added **deep-link** and **universal-link** support for direct navigation, and fixed a currency-conversion **rounding bug** affecting displayed totals.
- Crafted a **Lottie**-based tab-bar animation system as a contractor for **Zvuk**, a **Spotify**-style r**eal-time audio streaming** app for music and audiobooks with **8 million users** - supplementing static icons with state management driving active, inactive, in-progress, and paused states across light and dark themes, alongside a download indicator for **offline audio playback and CarPlay/tvOS integration**.

MTS Bank - Moscow, Russia (Remote) Nov 2021 - Feb 2023

Lead iOS Developer

- Implemented QR payments for **1.8 million users** using **RxSwift** and an **MVVM** architecture, optimizing the transfer flow and stabilizing the pipeline with **Unit/UI test coverage**. Resolved **19 Firebase analytics-event** duplicates.
- Led a **3-developer** Payments for Business team - regular check-ins caught blockers early - cutting time-to-market by **5%**.
- Raised the App Store rating from **2.8 to 4.5** through **A/B testing**, **analytics** integration, and module stability improvements.
- Refactored **2 legacy** modules and established **2 CI/CD** pipelines running automated UI tests and **SwiftLint autofixes** on every build to catch regressions and auto-enforce a **zero-warnings** policy before merge, enabling faster submissions.

VTB Bank - Moscow, Russia (Remote) Dec 2020 - Nov 2021

Senior iOS Developer

- Delivered a self-employed tax-reporting feature with **100% accessibility compliance** for a **high-load** banking app used by **10 million customers**. Connected the Federal Tax Service's **Open API** to handle registration and deregistration, tax debt calculation, and in-app payment. Created a statistics section spanning banking and non-banking services for a single view of users' finances.
- Enforced full **unit testing** coverage of business logic via **TDD**, **mocking**, and Xcode's code-coverage tooling, gating every merge.
- Onboarded **3** newly hired senior engineers on accessibility-compliant coding, architecture, and code-style standards.

Techno Service - Moscow, Russia (Remote) Jun 2016 - Dec 2020

iOS Developer / Full-Stack Software Engineer

- Pioneered an **offline-first**, end-to-end native **iOS (Swift)** and **Android (Java)** inspection app**.** Deployed via **MDM** to roughly 200 technicians auditing citywide heating infrastructure. Engineered the **Core Data** and **SQLite** persistence layers with **versioned schema migrations** to persist checklists and photos with zero connectivity, syncing via defined **backend API contracts** once signal returned.
- Extended a **C-based** FLIR thermal-camera **SDK** (**Bluetooth/Lightning/USB-C**) - a hardware integration - to compute real-time temperature extremums on pump surfaces, overlaying a crosshair and live reading onto thermal images to flag pump wear before failure.
- Mentored an Android contractor - brought in to help ship one feature - through code review and integration onto the shared codebase.

SKILLS

- **Languages**: Swift, SwiftUI, Objective-C, Foundation, UIKit, Kotlin, Java, native mobile app development, mobile development, API development, C/C++, Python, JavaScript, TypeScript, Angular, frontend, SQL
- **Architecture**: MVC, MVVM, MVP, VIPER, Clean, mobile iOS architecture, Coordinator, Router, Dependency Injection, SOLID, OOP
- **Frameworks**: Xcode, Git, GitLab, SPM, CocoaPods, XCTest, XCUITest, Unit and Integration testing, automated testing, Figma, Advanced debugging instruments, RxSwift, Combine, Core Data, Realm, GCD, multithreading, async/await, Swift Concurrency, CI/CD, Firebase, App Config, Core Animation, Core Graphics, AVFoundation, Core Location, CoreML, on-device ML, AI/ML, MapKit, WatchKit, watchOS, WidgetKit, CarPlay, Modular architecture, performance tuning
- **Practices**: Agile, Scrum, Kanban, TDD, JIRA, Push Notifications (APNS), AR, RESTful API, OpenAPI, Websockets, AI coding tools, Claude Code, Cursor, CodeRabbit, LLM APIs, AI tools, WKWebView JS injections, Webservice APIs, JWT, JSON, XML, TestFlight, App Store Connect, data structures, design patterns, iOS Networking Protocol, URLSession, GraphQL, subscriptions, Apple ecosystem

EDUCATION, CERTIFICATIONS, ACTIVITIES

- **Master's & Bachelor's in Computer Science** - IMSIT, Russia · Jun 2010
- **Jury member**: Global Tech Award, LifeQuest Hackathon, Global Startup Awards Africa, IEEE Senior Membership Panel Reviewer
- **Articles**: medium.com/@ndwdm · **Portfolio**: apps.apple.com/us/developer/gennady-dmitrik/id1154228999
